DETAILED ACTION

Receipt is acknowledged of arguments filed 18 March 2003.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Van Doorn et al (US Patent 5,942,848; hereinafter Van Doorn) in view of Hayama et al. (US Patent 5,936,339; hereinafter Hayama).

Re claim 1: Van Doorn discloses, in figure 1 and throughout the disclosure, a color display device comprising a substrate (3), having in the substrate a phosphor pattern of phosphor regions containing phosphors for emitting, in operation, red, blue and green light through a display window (25R, 25G, 25B), with at least a blue color filter (24B) layer extending between the blue phosphor and the substrate.

Van Doorn fails to teach the blue phosphors comprising phosphor particles provided with blue pigments.

Hayama discloses, in figure 2A and throughout the disclosure, a blue phosphor comprising phosphor particles (6B) provided with blue pigments (7B).

Art Unit: 2882

One of ordinary skill in the art at the time the invention was made would have been motivated to combine the color display device of Van Doorn with that of Hayama because in adding the pigments to the phosphor, the color display device can produce a higher emission brightness and better contrast than a display device without the pigments. By improving the brightness and contrast, an improved image is produced (column 2, lines 12+).

Re claim 2: Van Doorn et al. discloses, in column 4, lines 65+, the thickness of the blue color-filter layer to be in the range of 1.5-2.5 micrometers. This range includes the thickness less than 2 micrometers.

Art Unit: 2882

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth Gemmell whose telephone number is (703) 305-1937. The examiner can normally be reached on Monday-Thursday 6:30-5.
